DELFTship free

DELFTship™Free is a fully functional 3D hullform modeling program perfectly suited for students, home users or anyone else with an interest in ship design. And as the name already implies it's completely free of charge! The subdivision surfaces used by DELFTship™ allow for rapidly modeling the most complex shapes in a very flexible way. Combine this with a very intuitive user interface and the same reporting tools as DELFTship™Professional and you'll be designing professional looking boats in no time! Use DELFTship™Free to:

- Model any type of hull. DELFTship™Free is limited to hulls that are symmetrical with respect to the centerplane.
- Perform basic hydrostatic and resistance calculations.
- View, print and export the traditional 2D linesplan view which is calculated from the 3D model (shaded or black & white).
- Use the Lackenby hullform transformation to automatically adjust hull parameters such as displacement and longitudinal center of buoyancy to specified values while maintaining fairness of your model.
- Export to various 2D/3D file formats (.STL, .DXF, .OBJ, .GHS etc.)
- View plate expansions.

Although it lacks some of the more advanced modeling features of DELFTship™Professional, files created with either version of the program are fully compatible. Our model database contains a large number of free downloadable DELFTship™ models submitted by our users. These are a good starting point to see how things are done, or can be used as the basis for a new design of your own.

DELFTship™ free can be downloaded here.

Attachment 70Groupama4corrige1juin12.jpg not found

Hello everybody, just to point out some topics.
I use the latest free version and got some minus problems, i.e.:
I've tried to import background images in *.jpg (view attached file) but I'm allowed to do it only in*.Dbi format, wich I cannot find.
I've thought it was a restricted item of the free version, could you please confirm?
If the aswer is No, there is some way to solve the problem?
Thanks in advance and a Merry Xmas to all bloggers.

You should not use the "File/Import" comand to do what you want.
You can "Load" a background image in a view (other than the "Perspective View") by .right clicking inside the window of the view of your choice, to open a context menu, then select "Background Image" and then "Load". You will be prompted with the file selection dialog for .jpg, jpeg and bmp file types.
